

PROBABILITY AND STATISTICS SEMESTER PROJECT SPRING-2026

Read the details carefully and submit the details of the groups, Topics, and data to your CR within **3** days of announcement.

PROJECT DETAILS

1. Choose a large real-world data set for your work depending on your interest with **at least 5 variables**.
2. Develop a specific Web-based or desktop App for that data.
3. Use Statistical Methods to analyze that data you can integrate **R or Python language**.
4. Statistical analysis should consist of the appropriate:
 - Graphical and tabular data representation
 - Descriptive Statistical Measure and Confidence Intervals.
 - Probability Methods/Distribution
 - Regression Modeling and Predictions
5. Present your results in a well-presentable form.
6. Write a report on the whole task using the default pattern available at the end of this document.
7. The Submission Deadline of the Project will be **07 May 2026**.

GROUPS DETAILS

1. Each team will consist of a maximum of **5** members and must include students from **at least two different departments**. To meet the requirement, **exactly 3 students** from each group must be from the CS department.
2. Choose a leader and a name/logo for the team.
3. If any of your team members do not play a significant role in teamwork, the leader will intimate before the submission deadline.
4. If the team leader will not coordinate properly, the majority may change it and intimate it before the submission deadline.

EVALUATION SCHEME

- How carefully was the above-mentioned instruction followed?
- How many appropriate statistical tools were used?
- How attractive and intelligent is your interface?
- How is the Project report made?

General Instructions

1. Viva of your submitted work can be conducted based on initial evaluation.
2. Groups will be selected to present their Projects publicly.
3. **If your data, code, or application is similar to any other group (similarity or plagiarism) it causes zero marks for all the students in the group.**
4. Late submissions will not be entertained.
5. Paste all codes after giving them proper titles on a Word file using font size 9 and line space 1, so a minimum space can be managed.
6. Paste screenshots of your interface with different features/results on a Word file using the default format.
7. Any project that does not comply with default format will lead to zero marks without any evaluation.
8. You will submit both hard and soft files of your Project till the submission date.

First Page:

Project Title

[Logo if any]

1	Roll Number	Name	Section
2	Roll Number	Name	Section
3	Roll Number	Name	Section
4	Roll Number	Name	Section
5	Roll Number	Name	Section

Next Pages:

1) Problem Statement

Issue or problem that you will address XX

2) Objective

What will be the object of this work XX

3) Data Description

Link of the data (from where data is taken) and the details description of the data. XXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

4) Results

Consist of detailed screenshots of all results presented on web interference with suitable heading and description.
XX

5) Codes

Paste code with 1 line space and no extra space with proper comments XXXXXXXXXXXXXXXX

6) Conclusion

Conclude your results in one paragraph XX
